

**FAQ 06-03: Can I use the Q-pod to control shutters, etc?**

No. The Q-pod is a QCM transducer - a measurement-only device. It was designed to be powered by a standard computer USB port, and be the smallest QCM measurement device available anywhere.

If you need relay & control functions, you should consider the SQM-160 Monitor, or the SQC-300 Series Controllers, which contain relays for system & process control.
